# What is Microsoft Fabric?
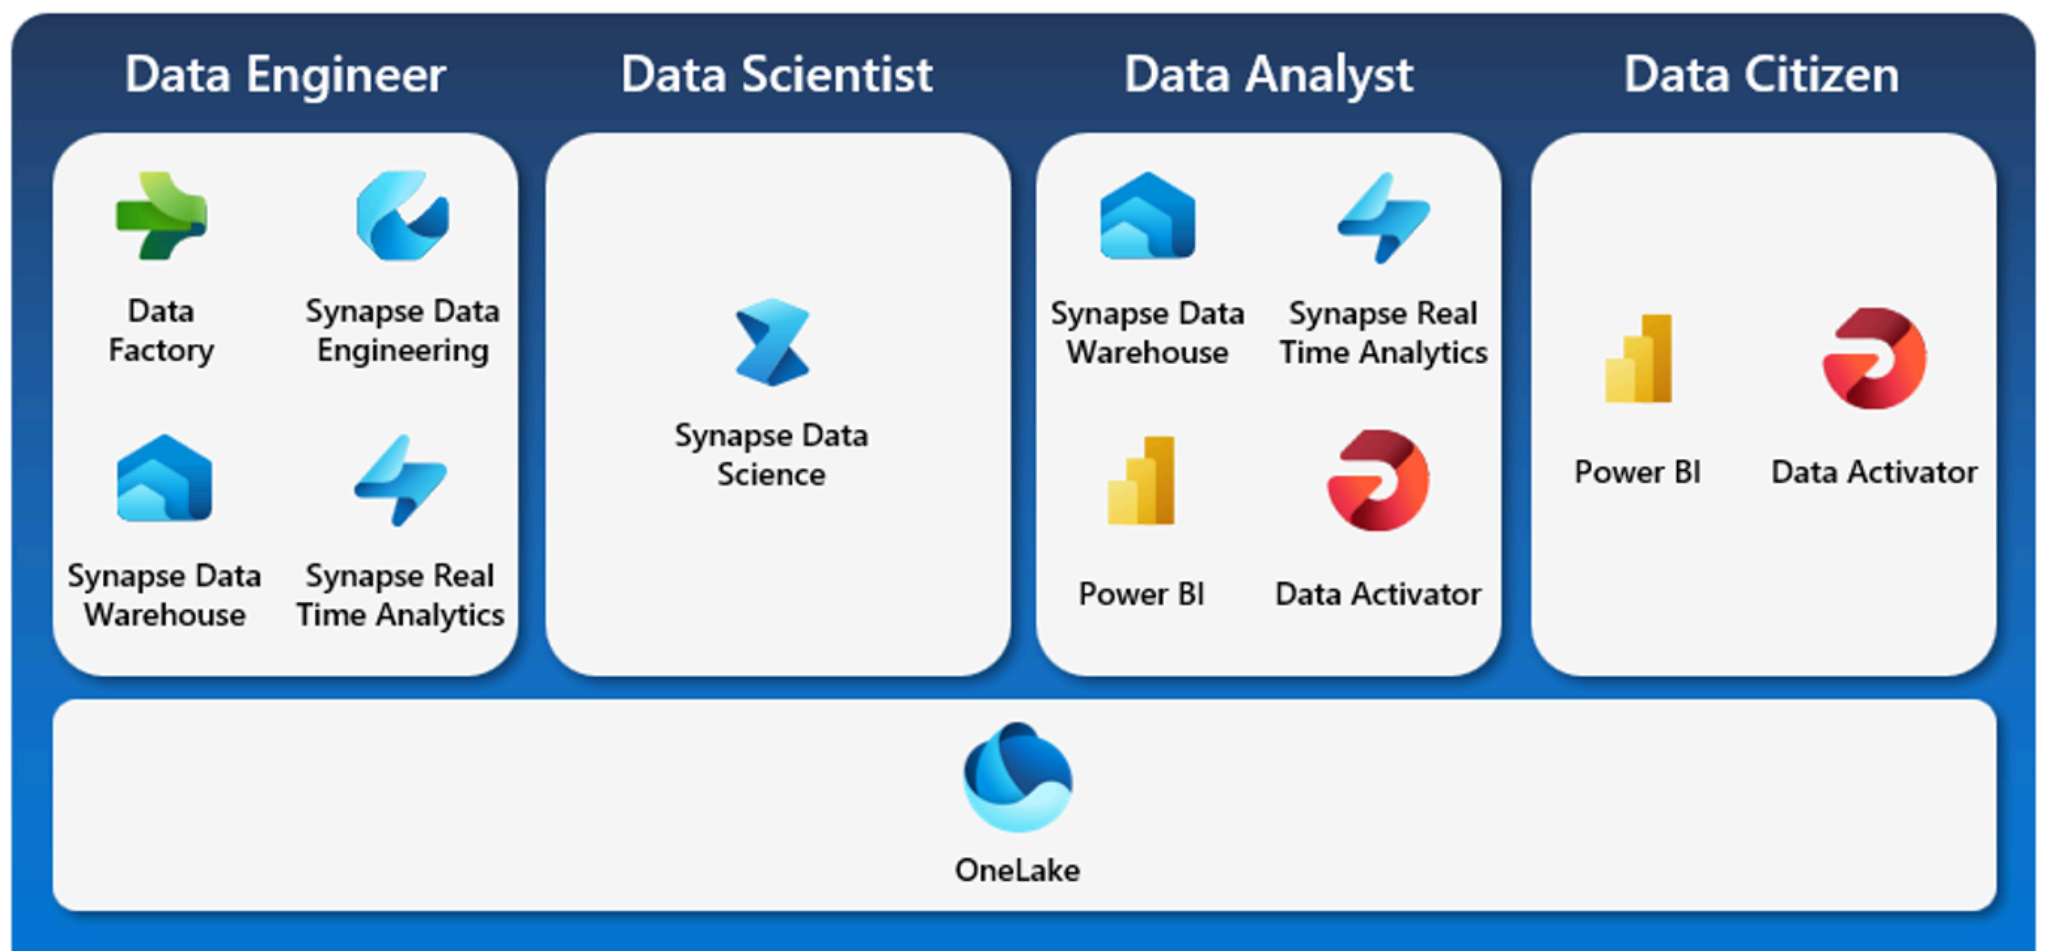

Think of it like an all-in-one data platform...
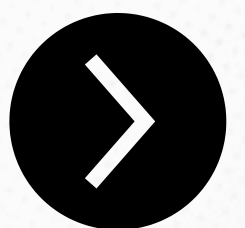

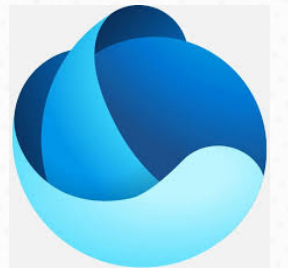

Where your team are unified under one platform and all your tools are in **one place……..**

Microsoft Fabric is a unified data platform that brings together:

- OneLake (storage)

- Data Engineering (Lakehouse)

- Data Factory (ETL)

- Power BI (BI & visualization)

- Real-time analytics
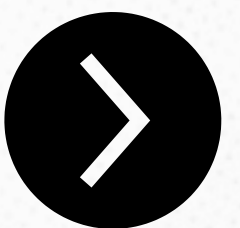

- Data science and governance

What makes it special……..

✅ No more silos between teams

✅ End-to-end workflows in one platform

✅ "Direct Lake" lets Power BI read data directly

✅ Built-in governance with Microsoft Purview

✅ Less integration. More innovation.
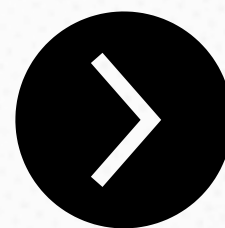

Who should care..........

🔧 Data Engineers – Build scalable pipelines faster

📊 Analysts – Get real-time insights

🎓 Learners – Stay ahead of the curve

🏢 Businesses – Save time and costs on complex stack setups

💬 **Drop a comment:**

What part of Microsoft Fabric excites or confuses you?
